SISTEMA COSTRUTTIVO ISOTEX - lo consiglio al 100%

NOTO (SR), January 24th 2018

I live in Noto (SR), a baroque town located in the far south of Sicily, already previously destroyed by the earthquake in 1693. Noto is a city with a high seismic risk (seismic zone 2) and with high temperatures in the summer that reach even 45 ° C. Other shakes have occurred over the years and from there, me and my family, to make up for these calamitous and atmospheric events, we set out to find the safest solutions for the construction of our new home. After various research on the Internet, comparisons and comparisons, the most appropriate solution in terms of anti-seismicity and thermal inertia hot / cold, were the BLOCKS CASSERO IN LEGNO CEMENTO of the company ISOTEX SRL of Poviglio (RE).

So, in 2015, we began to build our house with the aforementioned blocks, currently still to be completed, but even now (provided that the house is still without shutters and windows) we can verify that, in terms of thermal transmittance and sound insulation, ISOTEX products are truly exceptional.

All that remains is to advise 100% the ISOTEX building system for all those who want to build in the future and have an earthquake-proof house with excellent living comfort

Best regards

Salvatore Frasca
